

About The SecAI+ Exam

Chapter 00 · Episode 01 · Orientation — Your Roadmap to CY0-001

What Is CompTIA SecAI+?

Vendor-neutral AI security certification

Applies across clouds, platforms, and toolsets

The first of its kind from CompTIA

The Dual Focus

DEFEND AI

Protect models from adversarial attacks

Secure training data pipelines

Control access around AI APIs

USE AI

AI-powered threat detection

Automated incident response

AI tools in the SOC

Recognized Globally

Maps to DoD 8570 and 8140 requirements

Valued in government and
defense contracting

Why SecAI+ Matters Now

85%

Enterprises already hit by an AI security incident

2×

AI/ML security — fastest-growing specialty in security job postings

2027

AI security projected as a board-level mandate

Four Exam Domains

DOMAIN 1

AI concepts for cybersecurity

DOMAIN 3

AI-assisted security

DOMAIN 2

Securing AI systems

DOMAIN 4

Governance, risk, & compliance

Use This Course Well

1. Watch in order — earlier concepts support later ones
2. Review the exam objectives before and after each episode
3. Practice hands-on — PBQs test applied skill
4. Take practice exams before you book the test

SecAI+ Exam Info

Chapter 00 · Episode 02 · Orientation — Logistics, Domains & Question Types

The Exam at a Glance

60 QUESTIONS

Multiple-choice +
performance-based

60 MINUTES

About one minute
per question

600 TO PASS

Scaled scoring, 100–900

3 YEARS

Renew via 30 CEUs or retake

Domains & Weights

DOMAIN 1 · 17%

Basic AI concepts —
~10–11 questions

DOMAIN 2 · 40%

Securing AI systems —
the heavyweight

DOMAIN 3 · 24%

AI-assisted security —
~14–15 questions

DOMAIN 4 · 19%

GRC —
about 11 questions

BALANCE

No single domain is the exam — prepare across all four

Two Question Types

MULTIPLE CHOICE

Single and multiple response
No partial credit on multi-response
Scenario-based situations

PERFORMANCE-BASED

Simulated real environments
Analyze tool output and configs
Front-loaded — flag and return

Built for Practitioners

ANALYSTS

AI changes your
threat landscape

SOC

SIEM, SOAR,
AI-assisted hunting

AI/ML ENGINEERS

Security vocabulary +
adversarial mindset

GRC

AI regulatory
frameworks and policy

Before You Start

No official prerequisite

CompTIA recommends 2+ years hands-on IT security

Security+ or equivalent? You're in good shape

Exam Day Principles

1. Read carefully — BEST, MOST, LEAST qualifiers
2. Manage your time — bank the 20-second wins
3. Flag and return with fresh eyes
4. Trust your preparation

What SecAI+ Does for You

Chapter 00 · Episode 03 · Orientation — Career Value & Pathway

Career Benefits

VALIDATION

Proof you can
secure AI systems

SALARY

15–30% premium
over traditional roles

DIFFERENTIATION

A formal AI
credential few hold

COMPLIANCE

Maps to DoD 8570
and 8140

Where SecAI+ Takes You

ARCHITECT

AI Security Architect —
controls & isolation (senior)

MLSECOPS

MLSecOps Engineer —
pipelines, monitoring, testing

RISK

AI Risk Analyst —
impact assessments & documentation

More Roles in Demand

DATA

Security Data Scientist —
AI data & analysis tools

THREATINTEL

Threat Intelligence Analyst —
adversarial AI techniques

GOVERNANCE

AI Governance Specialist —
ethics boards and compliance programs

The Market Signal

AI/ML security postings up 112% (2022–2025)

2.5× cloud security growth · 4× SOC
analyst growth

AI-linked governance and risk roles up 67%

Your Certification Pathway

SECURITY+

The security foundation
this course builds on

AAISM

ISACA's AI security
management next step

SECAI+

AI security —
you are here

CISSP / CISM

Senior leadership
gold standard

Demo Setup Instructions

Chapter 00 · Episode 04 · Orientation — Get the Demos Running

Pick Your Python Environment

GOOGLE COLAB — RECOMMENDED

Free — use your Gmail account

Nothing to download or install

No libraries to manage

LOCAL PYTHON

Already installed and comfortable?

You manage your own libraries

Fine — your choice

Google Colab — Step by Step

Sign in with Gmail · File → New Notebook

Upload Your Demo File

Files → Upload · Colab is a sandbox — keep copies saved elsewhere

Run It

!python3 + Copy Path → Run

AI-Powered Demos Need a Key

Most demos are simulations — they run anywhere
A few connect live to OpenAI APIs
One-time setup: free OpenAI account + API key

Sign Up at platform.openai.com

Email · password · verification code

Generate — and COPY — Your Key

API keys → Create new secret key · shown once, store it safely

Wire the Key into Colab

```
!pip install openai -q · %env OPENAI_API_KEY=... · !python3 demo.py
```
